

BUILD ON STELLAR HACKATHON

LiraLink — get paid in lira from abroad.

Team MersiErOfis · **GENESIS TRACK**

ISTANBUL	SEPT 19-20	48 HOURS
----------	------------	----------

THE

SOLUTION

One link. They pay USD, you receive Turkish lira.

- ◆ *The merchant prices in TRY, not crypto.*
- ◆ *The rate is locked when the link is created.*
- ◆ *Settled by the official TRY anchor over SEP-6.*

Think

Live on testnet today: create a link, pay it, watch the lira land.

PM

Collecting money from a buyer abroad still costs percent.

- ◆ An exporter in Erdemli, interviewed today: a wire lands in ~1 day and loses ~3% — \$300 on a \$10,000 invoice.
- ◆ Our users: citrus exporters in Mersin, boutique hotels, freelancers invoicing abroad.

Think *Same invoice on LiraLink: a 50 bps anchor spread, about \$50.*

TECHNI WORKF CAL LOW

Merchant creates a TRY link → buyer pays USDC → anchor pays TRY to the IBAN.

- ◆ Our Soroban contract receives each payment.
- ◆ SEP-1/10/12/38 and a SEP-6 withdraw against the TR anchor; the rate is locked from its SEP-38 quote.

Think *Two rails, one ledger: the contract, or a classic USDC payment matched by memo.*

THE

PROOF

Every rail was paid for real on testnet.

- ◆ *Smart contract, memo payment, XLM payment.*
- ◆ *Each settled to the merchant's IBAN in lira.*
- ◆ *Live apps for merchant and payer.*

Think

WHAT IS

NEXT

Stellar skills vendored and cited by path.

- ◆ *Custodial by design; non-custodial is next.*
- ◆ *Then x402 agents and email wallets.*
- ◆ *Then a licensed anchor,
DeFindex yield.*

Think

Applying to SCF / InstAward with this prototype.

THE

TEAM

Mersi Erofi — three builders from Mersin.

- ◆ Hasan — QA/SDET, backend and the contract.
- ◆ Vuslat — merchant app.
- ◆ Yunus — payer app and wallet.

Think

We build and we test: every rail was verified before we showed it.
